Shipment & COD payment reconciliation

K.S. Kyprianou Moto Warehouse Ltd

40 Athinon Str., Strovolos, Nicosia • 22 328 788

Version 1.2 • July 2026

Contents

1. What this portal does

The ACS Payment Portal keeps track of every parcel ACS handles for the shop and matches the money that comes back to the right parcel. It replaces the manual job of cross-checking who paid for what.

Everything is linked by one number: the **ACS tracking number** (the “Αριθμός Αποδεικτικού” on the shipment list, the “ACS AWB NUMBER” on the payment file, and the “POD Δ.Δ.” on the cheque list). As long as that number matches, the portal reconciles automatically.

The three files you work with

File	What it is	How it gets in
File 1 – Shipments	The month-to-date “ΑΝΑΖΗΤΗΣΗ ΑΠΟΣΤΟΛΩΝ” export (1st of the month to today)	Uploaded on the Import page
File 2 – Cash/Visa	The ACS “Notification of Payment” file, as ACS sends it	Uploaded on the Import page
File 3 – Cheques	The printed cheque list delivered with the cheques	Typed in on the Cheques page

2. Logging in

1. Open the portal in your web browser: <https://acs-payment-portal-production.up.railway.app>
2. Enter your username and password (each staff member has their own login).
3. Click Sign In. You will land on the Home page.

Change the language any time

At the bottom of the left menu there is a language switch: **EN** for English and **ΕΛ** for Greek. The whole portal changes instantly, and it remembers your choice.

3. The Home page – your daily checklist

When you sign in you land on Home. It is a simple checklist for the day. Work down the list; each step turns green with a tick once it is done, so you always know what is left.

Step	Turns green when
1. Import the shipment file	You have imported the shipment file today.
2. Import the Cash / Visa payments	You have imported a payment file today.
3. Enter any cheques	Shows how many cheques you entered today (optional – only when cheques arrive).
4. Review items that need you	There is nothing left on the Exceptions page.

At the top of Home you also see today’s **outstanding total** and how much was **collected today**. The Dashboard (second item in the menu) has the fuller picture with charts.

4. Step one — import the shipment file (File 1)

How the shipment file works — read this once

File 1 is a **month-to-date** file: it always runs from the **1st of the month up to today**. Today (say the 9th) you export 1/7 to 9/7. Tomorrow you export 1/7 to 10/7 — the same file, one day longer.

Re-uploading is safe and expected: shipments already in the portal are updated with any changes, and tracking numbers that were not there yet are added. Nothing is duplicated, and anything already paid keeps its payments.

If you miss a day or two, no problem — just export from the 1st to that day as usual. Missing days simply are not in the file.

1. Click Import in the left menu.
2. In the “**File 1 — Shipments**” box, drag the Excel file onto it or click to browse and select it.
3. Wait for the summary. It shows how many rows were processed, how many were new vs updated, outbound vs inbound, and the total COD to collect. On a normal day you will see mostly “updated” with a few “new”.
4. If any duplicate tracking numbers were found, an amber note lists them. They are flagged on the Exceptions page.

What the portal does automatically

- **Direction:** each parcel is marked **Outbound** (going to a client, who owes the COD) or **Inbound** (coming to us, informational only).
- COD parcels start as **Awaiting**. Parcels with no COD are stored but need no payment.

Undo an import

Every import is listed under “Recent imports” at the bottom of the Import page, each with an Undo button on the right.

Uploaded the wrong file? Click **Undo** and confirm. For a payment file it removes the payments it added; for a shipment file it removes the parcels it created (parcels that already have a payment are kept, to protect your work).

5. Step two — import the Cash / Visa payments (File 2)

1. Click Import in the left menu.
2. In the “**File 2 — Cash / Visa payments**” box, drag or select the ACS Notification of Payment file (upload it as ACS sends it).
3. The summary shows how many payments matched a shipment, how many were unmatched, any mismatches, and the total collected.
4. Matched shipments update their status automatically. Re-uploading the same payment file is safe — payments already recorded are skipped.

Cash or Visa?

The ACS file does not say whether each payment was cash or card, so these come in labelled “**Cash/Visa (ACS)**”.

If you know a specific one was cash or card, you can change it on the shipment’s page (see section 8).

6. Step three – record cheque payments

Cheques arrive physically with a printed list. Enter each one by hand:

1. Click Cheques in the left menu.
2. Type the **tracking number** (the “POD Δ.Δ.” column on the cheque list) and click **Find**.
3. The shipment appears with its COD, how much is already paid, and how much remains. The amount box is pre-filled with the remaining amount.
4. Fill in the Bank, the Cheque number (Αρ. Επιταγής), confirm the Amount, and the payment date.
5. Click **Record cheque**. The shipment status updates immediately.

If no shipment is found

You can still record the cheque. It will sit under Exceptions until the matching shipment is imported, then link automatically.

7. Understanding the statuses

Every shipment carries one status. Most are set automatically from its payments:

Status	Meaning
Awaiting	Outbound COD parcel with no payment yet.
Partially paid	Some payment recorded, but less than the COD (still owing the rest).
Paid	Payments add up to the full COD amount.
Returned	Parcel was not collected and came back to us (you set this manually).
Exception	Needs a look: overpaid, or a payment with no matching shipment.
No COD	Nothing to collect – an inbound parcel or a COD of zero.

Split payments are fine

A customer can settle one COD with more than one method – for example €20 cash plus €60 card on an €80 parcel. Record each part as its own payment; when they add up to the COD, the parcel becomes Paid.

8. Reviewing and fixing a shipment

Open any shipment by clicking its tracking number (on the Shipments, Outstanding, or Exceptions pages). The detail page shows its information, its payment lines, and a status panel on the right.

Change the status by hand

1. On the shipment page, use the Status panel on the right.
2. Click any status to set it manually. Automatic reconciliation then pauses for that parcel so your choice sticks.
3. To hand control back to the portal, click **Clear manual override** – it recalculates the status from the payments.

Mark a parcel as returned

1. Open the shipment and, in the Status panel, click **Returned**. Use this when ACS brings back a parcel the customer never collected.

Add or remove a payment

1. Click **Add payment** to record a cash, visa, ACS, or cheque amount (useful for split payments).
2. To undo a mistake, click the **trash icon** next to a payment line, then confirm with the tick. The status recalculates automatically.

Nothing deletes without a confirm

Removing a payment always asks you to confirm first (a small “Delete?” with a tick and a cross), so you cannot remove one by accident.

9. Finding your way around

Page	What you'll find
Home	Your daily checklist, today's outstanding total, and collected today.
Dashboard	The fuller picture: totals, a status chart, and recent imports.
Import	Upload File 1 and File 2, see your import history, and Undo an import.
Cheques	Record cheques and see recent ones.
Shipments	Every shipment, searchable and filterable by status and direction.
Outstanding	Only what is still owed, largest first, with the total.
Exceptions	Everything needing review: short collections, mismatches, unmatched payments, duplicates.
Customers	Totals per customer — COD, collected, and outstanding.

10. Handling exceptions

The Exceptions page groups everything that needs a human. Here is how to clear each type:

Short collections

1. Shipments where less was collected than the COD — the customer or ACS paid part of it.
2. Check whether the rest is still coming. If a further payment arrives, record it and the parcel becomes Paid; if the shortfall is final, adjust the status by hand.

Amount exceptions

1. Shipments where the payments do not equal the COD — usually an overpayment. Open the shipment and correct the payment lines.

Unmatched payments

2. Payments whose tracking number has no shipment yet. They usually clear once you import the shipment file that contains that number. For cheques, check the tracking number was typed correctly.

Duplicate tracking numbers

1. These appeared more than once in an import. Open each, confirm the details, and adjust the status if needed.

11. Troubleshooting

Problem	What to do
The file will not import	Make sure it is the right Excel file (shipment export for File 1, Notification of Payment for File 2) and has not been re-saved in a different format.
A payment did not match	Check the shipment has been imported. If it has, confirm the tracking numbers are identical on both.
I uploaded the wrong file	Go to Import, find it under “Recent imports”, and click Undo.
A status looks wrong	Open the shipment and review its payment lines. Remove any mistaken payment, or set the status manually.
I set a status by mistake	Open the shipment and click “Clear manual override” to let the portal recalculate.
I cannot log in	Check the username and password. If still stuck, contact the other admin to confirm the account.

12. Quick reference card

Every working morning

1. Open Home and work down the checklist
2. Import → File 1 (this month's file, 1st of the month to today)
3. Import → File 2 (Cash / Visa payments) when ACS sends it
4. Cheques → type in any cheques received
5. Clear anything on the Exceptions page

Remember

File 1 is month-to-date (1st → today). Re-uploading updates existing parcels and adds new ones — never duplicates.

The tracking number links everything — it must match across all three files.

Payments can be split across cash, card, and cheque; they just need to add up to the COD.

Uploaded the wrong file? Undo it on the Import page. Removing a payment always asks you to confirm.

Switch between English and Greek with EN / ΕΛ at the bottom of the menu.
